## **Abstract**

**Background** Cystitis is the medical term for inflammation of the bladder. Most of the time, the inflammation is caused by a bacterial infection, and it's called a urinary tract infection. A bladder infection can be painful and annoying, and it can become a serious health problem if the infection spreads to your kidneys. The usual treatment for bacterial cystitis is antibiotics. Treatment for other types of cystitis depends on the underlying cause.

**Method**-A single acute clinical case of urinary tract infection with cystitis in a child was treated with an individualised homeopathic treatment, without aid of antibiotics. Urine routine and microscopic test pre and post homeopathic treatment were used for assessment of the case.

**Result**-the patient recovered remarkably with Homeopathic therapy.

**Interpretation**-Homeopathy is rapid in treating pyuria in a child without antibiotics.

**Conclusion**—Homeopathic therapy was observed to treat the urinary tract infection with cystitis in a child, which is routinely treated with antibiotics, with a rapid and a gentle approach.
