Abstract

Spiders belong to class Arachnida of Arthropod phylum. There are about 22,000 species of spiders, which have few common characteristic symptoms like: state of tension, awareness and high sensitivity emotionally. They are dominating, cruel, overactive, impulsive, revengeful, restless and sensitive to touch and music. Although all spider medicines have many similarities, yet they also have individual features which help us in selecting the specific medicine.

Keywords: Homoeopathy, Spider medicines, Arachnida
