Abstract

The use of allopathic medicines simultaneously with homoeopathic treatment had been condemned by Homoeopathic physicians since the inception of Homoeopathy on the basis of their prejudice that homoeopathic medicines would be neutralized/antidoted by allopathic medicines.

The aim of this *in-vitro* study was to provide experimental proof, to validate or dismiss the belief of contemporary homoeopathic physicians of restricting simultaneous use of allopathic medicines along with homoeopathic medicines.

The result of these experiments have shown that there is no negative impact of these allopathic medicines on the inhibition in growth of human pathogenic fungus *Candidaalbicans* by *Mezereum* 200 in *in-vitro* condition.

This experiment is only an effort to elicit the effect of above mentioned items on the inhibition in growth of human pathogenic fungus *Candidaalbicans* by *Mezereum* 200 in *in-vitro* condition and has nothing to do with any known or unknown side effects / contraindications of the allopathic medicines.
