Abstract

Vertebrobasilar insufficiency represents inadequate blood flow through the posterior circulation of the brain, which is supplied by the two vertebral arteries that merge to form the basilar artery. The vertebrobasilar vasculature is also known as the posterior circulation and supplies areas including the brainstem, thalamus, hippocampus, cerebellum, occipital and medial temporal lobes. In this article, a case of Vertebrobasilar insufficiency treated by mother tincture is being discussed. Homoeopathy plays a significant role in such kind of cases by its holistic approach of treatment. This article guides about how a Homoeopathic mother tincture helped to complete cure of Vertebrobasilar insufficiency with the help of Ginkgo BilobaQ.
