Abstract

I am honoured to contribute this letter to emphasize the significant role that homoeopathy can play in managing the adverse effects of conventional medical treatments. While allopathic medicine has undoubtedly transformed modern healthcare with its advanced diagnostics and life-saving interventions, its side effects remain a substantial challenge. From gastrointestinal distress and fatigue to emotional and neurological disturbances, the burden of drug-induced symptoms often compromises the overall well-being of patients. In such scenarios, homoeopathy emerges as a safe, effective, and holistic solution.
